

The world's first  
**internet based**  
ITS Quality Assurance System  
specifically designed for the  
**Traffic Signal**  
and ITS industry

Designed **BY** traffic signal  
engineers **FOR** traffic  
signal engineers

- No more lost or missing documents
- Minimises paperwork
- Encourages collaborative working
- Simple to use
- Increases client control
- Highly secure

**Intelligent Transport Systems Approvals Manager (ITSAM) has been developed by Traffic Solutions Limited in conjunction with Slough Borough Council to enable better traffic signal and ITS document control and quality assurance approval processes.**

A fully web based solution, **ITSAM** provides both internal and external contractors, consultants, managers and engineers with a powerful collaboration tool to use as a secure and effective method of coping with the ever increasing volume of information, documents, drawings and design files.

**ITSAM** is designed to be used in the office, on-site and at home and enables best practice in terms of quality assurance and document approval processes. **ITSAM** improves efficiency, reduces cost and helps mitigate litigation whilst helping to lower the carbon footprint by reducing print, photocopying and travel costs. Our system incorporates proven ITS approval processes and follows the DfT code of practice for signal design and implementation.

### Key benefits of ITSAM:

- Eliminates lost, missing and out of date documentation
- Provides a quality assurance framework
- Central database for traffic signal documentation
- Enables highly effective project collaboration
- Promotes accountability across the organisation
- Reduces carbon emissions through efficient work practices
- Version control protects against deleting and overwriting valuable files
